

Instructions:

Create a To-Do-List:

Create a new page withing your current project. Make sure to link it to you other pages using react-router-dom.

1. Create an input where the user can type a task.
2. Create a button so the user can add the task to the list.

Each task item should have a remove button, to remove the item from the list.

OPTIONAL: Give each list-item 2 more buttons. The first button should move your item up one step. The second button should move your item down one step.

Feel free to add any CSS that you would like to your project

Paste your Github link here:
